## LETTER OF TRANSMITTAL.

---

OFFICE OF THE PUBLIC PRINTER,  
*Washington, December 2, 1918.*

SIR: I have the honor to transmit herewith the annual report of the operations of the Government Printing Office for the fiscal year ended June 30, 1918.

Very respectfully,

CORNELIUS FORD,  
*Public Printer.*

The PRESIDENT OF THE SENATE,  
*United States Senate, Washington, D. C.*

# ANNUAL REPORT OF THE PUBLIC PRINTER.

---

OFFICE OF THE PUBLIC PRINTER,  
*Washington, D. C., December 2, 1918.*

*To the Senate and House of Representatives:*

All appropriations, including deficiencies, for the operation of the Government Printing Office during the twelve months ended June 30, 1918, were \$9,053,715.49, an increase of \$1,966,317.51 over the previous fiscal year. There was appropriated on account of the office of superintendent of documents \$332,330, leaving available for allotted printing and binding \$8,721,385.49. In addition to this amount, there were available resources on account of reimbursement funds (repay printing), \$4,625,540.79, an increase of \$2,931,014.62—173 per cent in excess of the repay income for the previous year, which in turn showed an increase over 1916 of 93.8 per cent.

The combined resources for 1918 total \$13,679,256.78. The disbursements and obligations outstanding chargeable against this amount were \$13,462,547.36, leaving an unexpended balance of \$216,709.42. This unexpended balance consists of the following items: Salaries, office of the Public Printer, \$7,572.37; holidays, \$25,021.56; salaries, office of the superintendent of documents, \$8,147.92; general expenses, superintendent of documents, \$20,170.03; printing and binding, \$155,797.54—this printing and binding balance is subject to over and under shipments on account of outstanding obligations for paper and material and supplies approximating a million dollars, as of date.

The total expenditures for maintenance, operation, and general expenses of the Government Printing Office, not including the expenditures of the superintendent of documents, were \$13,158,535.31, as compared with \$7,392,693.34 for the previous year. This increase of 78 per cent represents increased output, wages, and cost of stock on hand and ordered prior to July 1, 1918.

## OUTPUT FOR THE YEAR.

The activities caused by the progress of the war were responsible for an unprecedented volume of printing and binding during the year, far in excess of the output of any previous years, and the total value was double what it was in some of the past years, which were considered of excellent record. The many new bureaus created by war

necessity, together with the expansion of work in the established departments, demanded enormous quantities of printing and binding for immediate use. This work embraced every possible variety, and some very large orders were handled in an exceptionally short period of time; existing conditions, of course, required that what was strictly war work be placed above orders for routine work. With an average of about 900 more persons on the roll, the installation of three eight-hour shifts in most of the divisions, and an unlimited number of orders on hand, it was possible to lay out the work advantageously and produce a quantity of finished work undreamed of in the past and at a cost less than would have been paid in commercial plants. In addition to about 350 annual reports by the various departments and bureaus, ranging in number of copies from 1,000 to 450,000, there were 8 daily publications, including the Congressional Record with 33,000 copies and the Official Bulletin with 117,000 copies, both of which were mailed from this office each night. There were also 22 weekly publications ranging in copies from 5,000 to 130,000, 58 monthly publications ranging in number of copies from 500 to 200,000 and 10 quarterly publications ranging in number of copies from 500 to 3,800; a number of these were also mailed direct from this office. These publications are under issue of a certain date, and there must be no delay in the printing. Some very large individual orders were handled, such as 75,000,000 thrift cards, 25,000,000 questionnaires, blanks, and covers, 27,000,000 notices of classifications, and numerous other jobs ranging in number of copies from 1,000,000 to 5,000,000. All this work was furnished in a remarkably short time, at reasonable cost, and satisfactorily. In one instance, orders from a single department for as many as 100,000,000 copies of miscellaneous jobs were entered in the office in one day.

Millions of copies of various drill books, handbooks, regulations, etc., cloth bound, were ordered by the War Department, with demand for immediate delivery; the Navy Department was also furnished with vast quantities of printing and binding. The total charge for work for these two departments alone was over \$4,500,000.

The Agriculture Department was furnished with many millions of posters, pamphlets, circulars, etc., in connection with war work; over 18,000,000 farmers' bulletins were printed.

The Treasury Department was furnished with posters, cards, bulletins, pamphlets, etc., running into many millions, for use on income tax, thrift card, Liberty loan, and war-saving business.

In addition, the customary work for Congress and the various departments and bureaus was handled as usual.

The following comparative statement is a summary of the productive operations covering the most important items entering into printing and binding during fiscal years 1916, 1917, and 1918:

#### EXPENSE AND PRODUCTION.

The summary of expense and production for the fiscal year (facing this page) shows in detail the various items which go to make up the operating expense of each productive division, the value of product, the overhead expense and the manner in which it is distributed, and the amount of work performed for Congress, departments, independent bureaus, and private individuals, together with the condition of each printing and binding allotment at close of the fiscal year.

The total operating expense, as compared with previous year, increased \$3,824,047.21, while the value of work produced increased \$4,064,319.50. The general average number working each day increased 811. The total overhead expense increased \$126,459.55, and was due not so much to any increase in the number of employees in overhead divisions as it was to leave of absence and holiday expense and the necessary increases in pay of the low-salaried employees. The percentage of overhead expense in the Government Printing Office is, in so far as I have been able to ascertain, lower than in any large commercial printing plant in the country. It was only by the intensive application of up-to-date methods and constant improvements in plans of supervision that the administrative force was able to direct and oversee the great bulk of work with but a slight increase in that force.

There are two items which go to increase the cost of running the Government Printing Office which are not properly chargeable against that expense, but under the law they must be carried; I have repeatedly called attention to the same fact with the hope that some proper relief would be afforded along that line. One is the burden of furnishing heat, light, and power to the city post office without charge; cost of that service for the year was \$35,457.34, an increase of 32 per cent over previous year, and which, as provided by law, can not even be applied to the cost of printing and binding, but is carried as a dead-weight and is really a fictitious item in our cost of running the office. The other is the compulsory deposit in the Treasury as miscellaneous receipts of collections for printing done on orders from private individuals and Members of Congress; during the year charges for this work amounted to \$74,987.67, involving labor and materials, and as the receipts could not be used by the Public Printer as reimbursement for the cost of said labor and materials, the scale of prices had to be fixed high enough to cover in the cost, and thus in reality the various branches of the Government had to pay just that much more for their printing. A remedy should be provided by Congress to prevent these improper expenses being saddled on this office, and allow the Government Printing Office to stand entirely on its own actual expense account.

The number of pieces of job work handled was 44,256, an increase of 9,053 over the previous year. The composing-room force handling this work was increased an average of 23, and a night force was organized to expedite the work. The special orders covering personnel issued by the War Department, all handled by this force, have increased almost 1,000 per cent as compared with prewar times, and a special system of handling that work was necessary to insure rapid delivery.

Book composition amounted to about the same in number of ems set as in previous year; all but less than 1 per cent was set on linotype and monotype machines.

Presswork showed a remarkable increase as compared with previous year. The average number actually working was increased 174, and three eight-hour shifts were in operation; the number of forms sent to press increased 96,424 (53 per cent), hours of actual running time increased 204,508 (83 per cent), and chargeable impressions increased 2,084,050,675 (122 per cent). These figures do not include branch-office work, postal cards, or money orders. The increases in output were due to long hours of work, increased individual efficiency, careful supervision, and to a systematic laying out of the work in such a way that the full capacity of every press was used at all times.

The number of money-order books printed decreased slightly, due to the falling off in orders received.

The number of postal cards printed increased 88,338,162. The Post Office Department furnished stock for these postal cards to the amount of 6,234,067 pounds; the production of cards was stopped several times during the year from a lack of stock from the department, and at such times all presses were immediately put on war work. For shipping purposes this office furnished 1,994,088 cartons, 129,637 containers, and 13,861 wooden boxes. Under competitive bidding this office again secured the four-year contract for printing postal cards, dating from January 1, 1918.

The output of the electrotype and stereotype foundry was 1,721,958 square inches more than in previous year, an increase of 11 per cent. This was accomplished with but a slight increase in force.

The bindery divisions were called upon to do an unprecedented volume of work and responded in an efficient manner. The average number of employees actually working increased 605, and even so, a great many hours of overtime were necessary. Volume of work in the various classes of binding shows increases of from 20 to over 100 per cent. The stock used in binding operations increased 63 per cent; all possible economy was used to conserve this material, and satisfactory results both to departments and this office resulted. Piecework in the pamphlet binding operations was abolished, and the daily wage for these employees set at what was deemed a fair compensation in view of the average earnings in the past. I consider a piecework system too much of a strain on employees, and for the good of the service it was discontinued.

The value of total output of printing and binding by the Government Printing Office during the year was \$12,205,478.86. The value of paper and envelopes used in the work was \$4,672,183.87, which shows that every dollar's worth of printing and binding carried an average of 38½ per cent stock, as compared with 28½ per cent in 1917, and 18 per cent in 1916.

The manufacture on the premises of various supplies used in work was increased to a great extent. Thirty-three different kinds of ink were made during the year, totaling 130,475 pounds, in addition to a considerable quantity of ink ingredients. The number of rollers made for presses was 3,641, totaling 30,204 pounds of composition. Large quantities of comb and marble paper were printed. The metal-melting room, whose function is to remelt and retone all metals for use on typesetting machines, handled approximately 4 tons of monotype and 9 tons of linotype metal per day; the work was done at a comparatively small expense, and insured a constantly available stock of this material, thus doing away with any delay arising from purchase and shipment of metal. This room also reclaimed approximately 40 tons of dross during the year, and turned it into

linotype and monotype metal; dross was formerly sold at a few cents per pound. All of these supplies are in constant use, and were thus secured readily and at a very considerable saving over market prices.

Secret and confidential publications, of which there were very many, were handled throughout the office under strict and iron-clad regulations, preventing any premature publicity or any breach of the confidence of department officials.

A special study has been made of conservation of paper stocks, and while the quantity used was enormous, there has been no avoidable waste. Surplus from rolls and trimmings from flat stock were carefully assorted and used whenever it was possible; many thousands of dollars have been saved the Government by this plan.

The following statement shows the value of the finished product for period covering fiscal years 1916, 1917, and 1918:

#### SCALE OF PRICES.

Some wages were necessarily increased during the year; if they had not been, it would not have been possible to have retained the services of certain classes of labor. These increases, together with the higher cost of all materials and supplies, and the greater volume of work, made operating expenses more than in any previous year. However, by the most careful supervision, and the hearty cooperation of employees, all of whom realized that their chance of helping win the war lay right in this office, the individual output was gradually increased until it met and then overcame the larger operating expense, with the result that I was able to reduce the scale of charges approximately 5 per cent. Existing war conditions are responsible for fluctuations in costs, but I am determined and will see that the Government receives its work at as nearly actual cost as is possible.

## PAPER.

The business of securing an adequate supply of paper for the needs of Government printing during the year assumed serious proportions, and constant and unceasing vigilance was necessary in order to minimize delay in delivery of printing on account of lack of stock. The Joint Committee on Printing made awards for about one-half of the items estimated for, and later most of these contracts were annulled because of the unlooked-for increase in cost of production at the mills. It thus became necessary for the Public Printer to go into the open market for the majority of stock used for the work, and to secure it where he could and pay the price asked.

The existing condition in the paper market occasioned some delay in the delivery of work. It also was responsible in many cases, because of embargoes on railroads and scarcity of fuel at mills, for inability to supply certain grades of paper requested by the departments; in these instances I was able to make delivery only by substituting other grades of stock suitable for the work, generally at a saving to the department.

Shipments were expedited through Government agencies and, taking it as a whole and considering the prevailing extraordinary conditions, the paper situation was handled satisfactorily.

## MACHINERY AND EQUIPMENT.

The need of improved machinery was never so urgent as during the past year. The Public Printer was limited to an expenditure of \$100,000 for machinery, and that amount was insufficient to provide the necessary up-to-date replacements for satisfactory delivery of work. A few improved printing and binding machines were installed, and the result was the same as it always has been—a very practical saving in cost of output and the expediting of work. The general plan of replacing hand work by machine work has been followed as closely as possible considering the appropriation available. The following is a list of the machinery and equipment purchased during the year:

## MACHINERY.

## BUILDINGS AND PLANT.

The employees engaged in the upkeep of buildings and plant worked under considerable difficulty on account of the office being in operation almost constantly, and it being necessary that their work conflict as little as possible with productive operations. The number

of machines in the office is increasing all the time and, the older ones especially, require careful watching and prompt repair to keep them going. However, by careful management the necessary repairs were made with but small loss of productive time, and the results achieved were very satisfactory. The fact that the services of these trained mechanics are available at all times for emergency repair work on producing machines is of incalculable advantage to the office, and was of the greatest help in securing the immense output for the year.

The total cost of all repairs made to machines in the office by our own employees during the year was \$57,157.60.

The total cost of upkeep of buildings was \$40,415.18, a decrease over previous year of \$19,298.33. The following statement gives in detail the different items concerned in that work:

Mechanical repairs to machines .....	\$759. 40
Minor repairs.....	158. 29
Windows.....	1, 089. 57
Window shades and awnings.....	692. 91

Total.....	40, 415. 18

There were also thousands of other jobs handled, such as making of pieces of office furniture, files, etc.; making of form and paper trucks; moving and rearranging equipment for more satisfactory

production; installing 240-volt feeder circuit for presses; extension and enlargement of delivery platform; installation of charging panel for new trucks; rearrangement of pneumatic-tube service in the office; installing iron guards on punching, drilling, round-cornering, sewing, and cutting machines; installation of all new machinery; replacement of worn-out electrical equipment; installing heating coils in new warehouse, etc.

The lighting system throughout the various buildings received careful attention; where lights were of an obsolete pattern they were replaced with improved ones, many new lights were installed, and the office is a well-lighted institution.

The large number of shipping boxes used for postal cards and other printed matter were made in our carpenter shop from old discarded lumber and boxes, resulting in a conserving of prime lumber. There has been a thorough elimination of waste in any and all materials.

Wages of carpenters, machinists, electricians, and those engaged in similar occupations were raised to a point where they were about on a par with the pay in private employ, and the pay of all laborers was raised. If this had not been done, the office probably would have been crippled for help and the essential forces for production of work could not have been held, as private employers were offering more compensation than the Government Printing Office paid at that time, or, in fact, more than we are now paying.

#### POWER PLANT.

With practically no improvement in equipment, and the inevitable deterioration which each year brings to that portion which is antiquated, the power plant was called upon to produce a much larger amount of power than in any previous year. More machinery and longer hours of work in the office, together with an increased demand for heat, light, and power from city post office, which must be furnished by this office, brought the requirements for electric current to 4,601,000 kilowatt hours, which was an increase of 818,282 hours, or 22 per cent over previous year. This current was produced at an average cost of 1.455 cents per kilowatt hour, as against 1.17 cents last year. Our boiler plant is in need of new boilers with automatic coal-feed and ash delivery, and if the demand for service increases much more the plant as at present constituted will not be able to furnish it; moreover, a considerable portion of the present plant positively must be replaced as soon as such equipment can be purchased without interference with war needs, in order to be assured that the demand as of to-day will be properly met.

## PERSONNEL.

The general average number of separations from the service has been approximately 200 per month, the two principal reasons given being those of better compensation in other places and draft into military and naval service. The increasing volume of work absolutely required those vacancies be filled and, in addition, the various forces be increased as much as possible. The clerical work involved in handling all these separations and appointments, and numerous statements and other data called for by various Government bureaus, was heavy and trying; many of our experienced clerks left the service and it was necessary to take inexperienced employees and train them in the work. If there were a better equalization of salaries in the office and one which would compare favorably with private employment there would not be so many desirable clerks leaving the service. With their salaries fixed by law, I was unable to meet the offers made from other sources, and the good of the service suffered. It is a fact that unskilled laborers, whose wages were raised in order to bring them to a par with pay by private employers and thus keep them, receive as much, and in some cases more, than trained clerks whose salaries can only be changed by congressional action.

The number of women employed in the office now is far in excess of previous years; they have been assigned to many branches of work heretofore filled by men only, and show a willing desire to carry it through.

## MISCELLANEOUS.

The medical and surgical cases receiving treatment in the emergency hospital connected with the office totaled 4,194, an increase of 217 over previous year; of this number 1,333 were of a surgical nature, requiring 2,069 redressings, and 2,861 were medical cases. In 2,668 cases the employees were able to continue their work after treatment, and that fact was of importance, considering that services of all employees are needed at all times. The amount of machinery in constant use, and the increasing number of persons in daily contact with such machinery, together with the breaking in of new employees as machine operators, fully accounts for the slight increase in total cases as compared with previous year. Every consideration is given the working conditions and health of employees, and the expense of the emergency hospital is small in comparison with the benefits to the Government from its operation. During the year \$2,242.53 was paid to disabled employees under provisions of the employers' liability act.

The collection of waste paper from the various departments and bureaus of the Government totaled 13,746,784 pounds, an increase of over 40 per cent as compared with last year. This waste is collected, hauled to this office, baled, and then sold; all expense of this work is paid by this office, and ultimately enters into the cost of printing and binding. Sales of various wastes and condemned materials, all the payments for which will become a deposit in the Treasury as a credit to miscellaneous receipts, were: Waste paper, \$141,147.34; machinery and equipment, \$2,243.22; roller composition, \$1,207.94; waste metal, \$9,620.12; barrels, \$315.70; wood and sawdust, \$1,355.68, and leather, \$1,045.59.

The business of delivering work has grown to immense proportions, and has taxed to the utmost the equipment and employees engaged in the work. It became necessary to purchase two new 5-ton electric trucks to properly care for deliveries.

This office has been handicapped for working and storage room for years; every available foot of space is being utilized, and yet the lack of proper and sufficient space is the one outstanding factor in any delay in output. In December, 1917, a small building, located on H street west of the old printing office, was leased and converted into a warehouse; the rent was nominal, and space thus secured was used for storing a small part of the paper stock.

#### PUBLIC DOCUMENTS.

The work of this division for the year, involving as it did the distribution for the departments of 44,668,164 publications, the sale of 7,853,886 pamphlets and books for which \$250,362.35 was received, the handling of 297,334 letters calling for information on all matters relating to United States Government publications, the compilation of official catalogues and price lists, and the maintaining of a large and ever-changing mailing list, was accomplished satisfactorily, but was handicapped greatly by the loss of many experienced clerks and cataloguers through the low salaries in effect for such work in this office.

The research and information features are being used more extensively each year, and countless inquiries by letters, telephone, telegraph, and personal interview have been answered. These inquiries come from persons in all conditions of life, showing that the general public is very much interested in what the Government has to offer in its publications.

The demand from libraries throughout the country for relief from the overcrowded condition of their shelves with excess and, to them, useless Government publications continues to grow. There are three agencies through which these libraries may receive the publications—Government Printing Office, departments, and Members of Congress.

Each of these agencies, unknown to the others, may supply copies, and in this way a surplus would accumulate. Libraries receive from this office copies of practically all publications, and as some are of no interest whatever to patrons of certain libraries, a stock of useless publications is gradually stored up. Virtually all of these copies are due eventually to be returned to this office where, after examination as to permanent value, they probably will be destroyed. This is a wrong condition and should not exist; it tends to clog the mail, increases railroad hauling, is a waste of paper and printing, and an added expense to this office. As an evidence of the faulty distribution of Government publications, 277,624 copies were returned from libraries during the year, and about nine out of every ten were condemned and sold as waste paper, being either obsoleté or in excess of demand. However, without action by Congress, there is no relief in sight, as this distribution is governed by law.

Notwithstanding all efforts to reduce the stock of books on hand and to the credit of departments, the balance at close of year was 22,703,565, an increase of about 8,000,000 over the previous year.

The work of the mailing section has greatly increased, and in the matter of number of different lists and total names is exceeded by no other publishing house in the country. There were in use 1,150 mailing lists, with over 1,000,000 names; 328,500 names were added, 208,829 names were dropped, and over 80,000,000 impressions were made from stencils during the year.

#### RECOMMENDATIONS.

I present for consideration the following:

Improvements are constantly being made in the productive machinery necessary in a modern printing and binding plant. Such machines are, as a rule, made so durable as to last for many years, but in a way their sphere of usefulness disappears directly a pronounced improvement is on the market, and it is a wise policy, after careful investigation, to discard the old and invest in the new. Experience shows that the output of a new machine generally is from 30 to 50 per cent greater than that of the old one it replaces, and the initial cost is thus soon made up. The Public Printer's expenditure for machinery is fixed at not over \$100,000 per year. In ordinary times and with ordinary prices prevailing this limited amount could possibly be gotten along with, but under present conditions of constantly increasing prices, together with the urgent need for more machinery in order to produce the larger amount of work demanded from the office, a \$100,000 limit for machinery is altogether insufficient, and is a very serious detriment to the service. The Public Printer should be free to purchase the machinery he knows is needed if he can so arrange it out.

of his total appropriation, and I recommend that he be authorized to expend, if needs of the service so demand, up to \$200,000 for machinery out of the regular appropriation for printing and binding.

The buildings occupied by the Government Printing Office do not furnish sufficient working space to properly handle the work; if adequate room was available the Government would receive their work in better time and at a better price. There is of necessity a large amount of expensive hauling, moving, and changing about on account of the crowded conditions, and this situation is a very serious handicap to a maximum output—and the Government needs a full and maximum output at all times. Volume of printing and binding has increased over 50 per cent this year as compared with last, and over 100 per cent as compared with normal years in the past. The only relief in the matter of storage room was the securing of a small building adjacent to the office and its use as a substoreroom. No relief whatever has been had in space for productive operations, the crowded condition of former years has become worse, and the congestion has about reached the breaking point. The need of a new building has repeatedly been brought to the attention of Congress, but no relief given. The report of the Public Buildings Commission, submitted to Congress in December, 1917, states that the demand for more room for activities of the Government Printing Office is an imperative and positive one, that new quarters for the work of the office should be made without delay, and that a new building is required, at an estimated cost of \$3,950,000. I thoroughly agree with these statements, coinciding as they do with my suggestions during the past five years, and I earnestly recommend congressional action be taken at once on the report and recommendation of the Public Buildings Commission in so far as it concerns the Government Printing Office.

The amount of waste paper collected from the departments and bureaus, baled in this office and then sold, is increasing rapidly. It has been necessary to install additional equipment for baling, the labor cost is more, and it takes the full time of one or more large trucks to handle it. All this expense, under the present system, is a part of the cost of operation in the Government Printing Office, whereas it should be carried by the various bureaus and departments. I recommend authority be given the Public Printer to make a monthly charge for the service on the basis of cost per bag.

A general rearrangement and increase of salaries of employees doing clerical and supervisory work is needed; most of these salaries are fixed by law, and it is not in my power to increase them without authority from Congress. The Government Printing Office needs trained clerks and supervisors, but is losing many and will lose more if the salaries are not put at least on a par with those for similar work

in other departments and bureaus. Inducements in private employ are constantly being offered; without authority I can not match these inducements, and our part of the service suffers in many cases. I recommend a general increase in compensation for this class of service.

The number of employees in this office whose advancing years make their services of less value than those of younger persons is naturally increasing, and from a standpoint of economy alone it would be a good investment for the Government to pension and retire such employees and fill their places with younger persons. I again invite attention of Congress to the need of a fair and just retirement law.

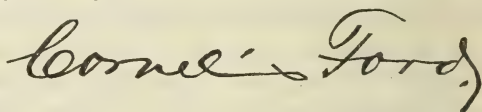

The needs for printing and binding are increasing by leaps and bounds. Not only have the established departments increased their work tremendously, but the many newly created bureaus require vast quantities of this work. Inquiries develop that a very considerable quantity of printing was ordered from commercial printers, and that the prices charged were as a general rule higher than the Government Printing Office would have charged; the increases varied from 2 to 470 per cent. The same inquiry showed that if all the printing and binding ordered from commercial plants had been done in this office the saving to the Government would have been approximately 60 per cent. Without making any reflection whatever, it is evident that in many cases bureaus of the Government have paid excessive prices for printing. I have always been firmly convinced that all printing and binding for the Government, with the exception of that small portion concerned with field work at remote points, should be handled by the Public Printer, who is in reality the official printer for the Government and who should be responsible for all of that work. In such case a more definite knowledge would be had of the needs of the services as regards printing and binding, and plans could be laid accordingly. The output of the office has been increasing every year, and can be further increased so as to take up the work for the Government now done by commercial printers. The Government Printing Office is in a position to acquire a large stock of paper at better prices and more quickly than private plants; its facilities for general work are unsurpassed by any other office; work is done at cost, and no profit is added to charge; its overhead expense is less than in any other large printing plant, and its executive organization can without any material increase supervise a much larger output. The greater the volume of work, the smaller the cost to the Government. I realize that at times the office may not be able to handle some certain jobs wanted by departments, but in that case, if proper authority was provided, the Public Printer could contract with commercial firms for the work. The Public Printer is at all times in close touch with trade

conditions and prices by reason of the nature of his position, and if contracts were made by him for such printing that could not be done conveniently at any time in the Government Printing Office there would be small chance for excessive charges going through. A conservation in certain classes of stocks, economy in cost, and more uniformity in style of Government work would, in my opinion, result if all printing and binding was centralized in this office. I earnestly recommend immediate legislation that will require all printing and binding orders from departments and bureaus of the Government, excepting such small jobs as concern field work at remote points, to be placed direct with the Public Printer and to be done in the Government Printing Office, with proviso that such work as can not at any time be handled in the Government Printing Office may be let out by the Public Printer on contract to commercial printing offices.

The existing laws permit a very serious duplication in the distribution of public documents, and require them to be forwarded to libraries which in many cases have no good use for them. I again recommend that Congress take proper action to remedy this condition so as to eliminate the useless waste and the burden on the mails.

The greatest credit must be given the employees of the Government Printing Office for the magnificent output during the year; they have responded willingly and patriotically to extraordinarily heavy demands for long hours and hard work, have been liberal subscribers to Liberty bonds, war-savings stamps, and other Government needs, and there has been a spirit of earnest and loyal cooperation that was most gratifying. I desire to heartily congratulate and commend them for their good work.

Respectfully,

## REPORT OF THE MEDICAL AND SANITARY OFFICER.

SEPTEMBER 3, 1918.

SIR: Herewith is a statement showing the number of cases, medical and surgical, arising during working hours and receiving treatment at the Government Printing Office emergency room during the fiscal year ended June 30, 1918. A total of 4,194 cases were treated during the year, 1,333 of these of a surgical nature and required 2,069 redressings in their treatment; 2,861 were medical cases, and are shown in columns of table to show the number that it was possible to relieve and who remained at work and the number who were obliged to go to their homes after temporary relief was given. There is also a list of employees who received compensation under the act of September 7, 1916—to provide compensation for employees of the United States suffering injuries while in the performance of their duties—for which a total of \$2,242.53 was expended.

Respectfully submitted.

D. P. BUSH, M. D.,  
*Medical and Sanitary Officer.*

Hon. CORNELIUS FORD, *Public Printer.*

GOVERNMENT PRINTING OFFICE,  
OFFICE OF SUPERINTENDENT OF DOCUMENTS,  
*Washington, October 19, 1918.*

SIR: In compliance with the provisions of section 61 of the general printing act approved January 12, 1895, I have the honor to submit the Twenty-fourth Annual Report of the Superintendent of Documents, being for the fiscal year ended June 30, 1918.

The work of the Documents Office for the year, involving a distribution for departments of 44,668,164 publications; the sale of 7,853,886 copies, for which \$250,362.35 was received; the handling of 297,334 letters calling for information on all matters pertaining to United States Government publications; the compilation of official catalogues and price lists; and the maintaining of 1,150 mailing lists containing about 1,000,000 names was accompanied with many difficulties and hardships through the loss of a number of our experienced employees.

The clerk problem is daily becoming more serious, owing to the low salaries paid. The Civil Service Commission is unable to supply clerks and cataloguers at the salaries we have to offer, and although permission has been granted to employ from the outside we have been unsuccessful in filling vacancies.

It is earnestly hoped that Congress will remedy the present condition in the next appropriation bill so as to permit us to offer salary inducements of a nature sufficiently inviting to retain those experienced in our work, and to cause acceptance of positions in this office in the face of the salary allurements offered by other, and especially the new, departments.

The research and information features of this office are being used more extensively each year, and countless inquiries by letter, telephone, telegraph, and by personal inquiry have been answered. The body of inquirers embraces all classes of our people—Members of Congress, departments, Army and Navy officers, agriculturists, scientific men of all classes; and above all, the bulk of the inquiries has come from individuals in the ranks of the plain people, who, as a body and individually, are coming more and more to recognize the usefulness of this office as a distributing point for Government publications.

LIBRARIES.

The demand from libraries for relief from the overburdened condition of their shelves with excess Government publications continues to grow. Some remedy must soon be found to relieve the libraries of their present burdens, and to allow all libraries which meet certain

requirements to obtain only those Government publications for which they actually have need.

There is a gradual decrease in the number of designated depositories which under the law are entitled to receive one copy of everything published for general distribution. This no doubt can be attributed to lack of shelf room to accommodate the publications which amounted to 2,447 copies during the past year for each library. The underlying motive which prompted Congress to provide for the establishment of one library in each Congressional district was theoretically good; but time has proved that in a great many districts libraries can not be found that are in a position to care for the enormous quantity of publications received under such designation.

Requests from nondepository libraries of the country have been freely supplied, but unfortunately this office receives for general library distribution a stock of only a small percentage of publications at the time they are printed. It is hoped that some time one agency will be established that will be in a position to take care of the demands from the libraries.

Below is a statement of library distribution for the fiscal year 1918:

Distributed to 482 designated depositories in 1918.....	1, 522, 348
Distributed to 725 geological depositories in 1918.....	14, 450
Distributed to 1,550 Official Gazette depositories in 1918.....	140, 588
Distributed to various nondepository libraries in 1918.....	14, 409

#### CATALOGUES, INDEXES, ETC.

The following publications have been compiled and issued during the fiscal year ended June 30, 1918: Document Index, No. 24, Sixty-fourth Congress, Second Session, December 4, 1916-March 4, 1917; Seventeenth Preliminary Schedule of Volumes, Reports and Documents of the Sixty-fifth Congress, First Session, April 2-October 6, 1917, and the Special Session of the Senate, March 5-16, 1917; Document Index, No. 25, Sixty-fifth Congress, First Session, April 2-October 6, 1917, and the Special Session of the Senate, March 5-16, 1917; Monthly Catalogue, July, 1917-June, 1918.

The Document Catalogue, Sixty-third Congress, 1913-1915, is in press.

Twenty-nine price lists of United States Government publications on various subjects for sale by this office have been compiled, totaling 151,000 copies, and 155,267 copies have been distributed.

#### DISTRIBUTION OF DEPARTMENTAL PUBLICATIONS.

During the past year there were received for consignment stock of the departments 52,948,516 publications, and the records show a distribution of 44,668,164, which was an increase of 7,727,151 copies over that of the previous year. This represents the largest number of publications handled since the work was placed under your supervision, and any advocates of a return to the old plan, whereby each department performed its own mailing operations, may well stop and consider the additional cost that would have been involved in hauling the publications to their respective departments and then back to the post office, whereas now direct communication is had with the

post office by means of a conveyor, which deposits the publications in the mails without cost for hauling, and with the expenditure of the minimum amount of labor.

It is my intention to recommend in the estimates for the coming year a lump-sum appropriation for all labor necessary in making the distribution of Government publications, so as to provide for over-time work, which is absolutely necessary to prevent congestion and delay that can not be avoided in a plant where the manufacturing operations continue for 24 hours and those for distribution for only 8 hours. Notwithstanding the increase in this branch of our work, it has been performed with very few complaints from the issuing offices, and in some cases the delay was unavoidable on account of shortage in the envelope stock.

*Comparative statement showing number of departmental publications received and distributed during the fiscal years 1913 to 1918, inclusive.*

	1913	1914	1915	1916	1917	1918
Received.....	34,866,026	40,467,920	37,120,915	36,816,842	38,128,146	52,948,516
Distributed.....	25,292,703	39,136,659	34,714,186	36,892,075	36,941,013	44,668,164

#### ACCUMULATION OF PUBLICATIONS.

The best evidence of the Government's faulty distribution methods is disclosed by the return of 277,624 publications from libraries and departments during the year, and this number would easily have been doubled if we had been in a position to handle them. It must be recognized that considerable labor is required to assort and list these returned publications, and of the number above mentioned 233,836 were condemned and sold as waste paper for the reason that they were either obsolete or in excess of any possible demand.

The letter which you addressed to the departments in the beginning of the year, urging a careful consideration of their stock of publications for the purpose of disposing of excess and obsolete copies found on hand, met with favorable action on the part of most of the departments, with the result that relief was obtained from our congested storage conditions.

Notwithstanding your efforts to reduce the stock of publications held for departments, the books show a balance on hand to the credit of the various departments at the close of the fiscal year of 22,703,565, which is an increase of over 8,000,000 from the previous year, and the fact that we have been able to accommodate them is due to the publications being of the small pamphlet variety.

#### MAILING SECTION.

There is no circulating department of any publishing house in the country which compares with that of the United States Government, with 1,150 different mailing lists totaling over 1,000,000 names.

Two of our lists, namely, the Official Bulletin with 115,000 addresses and the Congressional Record with about 30,000 names, are

run daily, and such constant use of the stencil is a very good test as to its durability. We believe the new equipment you authorized to be installed will meet the requirements.

The inability of the Civil Service Commission to supply typists has delayed the transferring from the old system to the new stencils, but the available force has made considerable progress.

The mailing operations for the year called for over 80,000,000 impressions to be made from the stencils on wrappers, envelopes, and cards, and the maintenance of the list required the addition of 328,500 names and the dropping of 208,829 names.

#### CONDITIONS AND RECOMMENDATIONS.

Notwithstanding the conditions imposed by the war (an important feature of which has been inability to replace by trained help the clerks called into the service and otherwise leaving), the large volume of business has been kept up to date by the persistent hard work of those remaining. Every condition points to the conclusion that when the war is over and men resume their accustomed occupations, the business will advance again by leaps and bounds; and as now constituted the expansion would tax the resources of the office, both clerical and mechanical. It seems advisable, in the face of our past lessons on "preparedness," to make ready for meeting the emergencies now by training a competent force and securing sufficient equipment. To the clerks and helpers who have labored with me to keep up the work and to uphold the prestige of the office, I wish to offer my heartiest commendations.

Respectfully submitted.
